Summary

Business analytics master student with a background in business and marketing. I work with large labor market data in PySpark and I am moving into machine learning. I have a solid base in statistics and I try to explain results in clear, simple terms. I am looking for a first role in machine learning or data.

Skills

- **Programming:** Python (intermediate: pandas, scikit-learn, TensorFlow / Keras), R, SQL
- **Machine learning:** regression, tree models, neural networks, transformers (learning)
- **Big data:** PySpark, Spark SQL
- **Cloud and tools:** AWS EC2, Power BI, Quarto, Git
- **Foundations:** statistics and probability

Education

- **MS, Applied Business Analytics** — Boston University, Metropolitan College (*current*)
- **MSc, Marketing** — HULT International Business School
- **BSc, Management** — Rennes School of Business

Experience

- **Social media and content — OneEvent, London.** Managed the public image of DJs on social media. Created reels and posts and helped grow their reach.
- **E-commerce and marketing intern — Fereira, France.** SEO and online marketing for an e-commerce shop.

Selected projects (Boston University)

- **Salary insights at scale.** Cleaned a 700 MB Lightcast file in PySpark and charted pay across 72,498 job postings.
- **Predicting salary.** Built linear, polynomial and random forest models, and found and fixed a multi-collinearity problem that blocked the model statistics.
- **A job market in SQL.** Built a star schema from one flat file and answered four labor market questions in Spark SQL.
